

Top Exotic-Pet Drug Doses

A curated, cited reference for primary-care exotic-pet clinicians.
Generated from the live ExoticRx formulary. Every entry carries its primary source and an evidence-level label.

How to use this document. Each table below shows a per-species selection of the most commonly prescribed drugs in primary-care exotic practice, with low–high mg/kg dose ranges, route, frequency, evidence-level grading, and the primary source the rule is drawn from. Use it as a starting point, not a substitute for verifying a dose against the calculator and the original literature for each patient.

Evidence levels: **Strong** — replicated PK/PD or controlled trials. **Moderate** — single PK study or consistent case series. **Weak** — limited data. **Anecdotal** — clinical experience without published support. **Extrapolated** — derived from a related species; use the lower end of the range.
